# >> The smart Media–System software update.

How it works: The update procedure explained, step by step.

The preparation — At home:

↓
Download

Provided by TomTom

All you need is an empty USB stick.

Here we go: Insert the USB stick in your PC.
Download the software update with the link provided below and select your USB as the save location under "Save as".

The update — In the vehicle:

Continue the process directly in the vehicle - please allow around 20 minutes in all.

First of all, switch on the ignition and then the Media–System in your smart.
Now insert the USB stick containing the update file in your smart's USB port.

The Media–System indicates that it has recognised a USB stick.

Your smart Media–System inquires whether the software update is to be carried out.
Please confirm by clicking on "Yes".

NB: If your smart Media–System does not display this prompt, it is already fully up to date. In this case, you can abort the process by removing the USB stick.

The update process will now start automatically. A yellow bar shows the update progress.
Please do not remove the USB stick during the update process. This step takes around 15 minutes.

A countdown message appears shortly before completion, and the system is subsequently restarted.

After restarting, the system displays the customary system message.
Simply confirm this by clicking on "Done".

Mission accomplished. The update is complete.
Please confirm by clicking on "OK".

Your smart Media–System is fully up to date and fully functional again.

Note: In order to subsequently check the system for correct functioning, the vehicle must be outside (GPS reception required).
The update itself can be carried out without GPS reception in a garage/underground car park.

Should you have any questions, please feel free to contact the smart infocenter (0800 2 77 77 77 7) or your dealer.
